PROGRAM AND DEMOGRAPHIC CHARACTERISTICS OF SUPPLEMENTAL SECURITY INCOME BENEFICIARIES, DECEMBER 1984*

In December 1984, 4,029,300 persons received federally administered supplemental security income (SSI) payments (table A). Sixty percent of all recipients (2,418,500) were disabled; 38 percent (1,530,300) were aged; and 2 percent (80,500) were blind.

There were 3,780,700 adult recipients and 248,600 children. Over half of all recipients were aged 65 or older, including 22 percent of disabled adults and 32 percent of blind adults.

SSI payments for the 1984 calendar year totaled $10.4 billion dollars—$8.3 billion in Federal SSI payments and $2.1 billion in State supplementation. Nearly $1.8 billion of the State supplementation was federally administered and the remaining $298.7 million, State administered. In the period between December 1983 and December 1984, the federally administered SSI caseload rose by 127,800. Disabled cases increased by 111,400, aged by 14,900, and blind by 1,600. Total payments for 1984 rose $967.6 million from 1983, due, in part, to a 3.5 percent Federal SSI benefit rate increase in January 1984. Federal SSI payments rose by $858.5 million and State supplementation by $109.1 million.

Only one out of four persons receiving federally administered SSI payments in December 1984 had been converted from previous State assistance programs in 1974.[1] Included in this group, 38 percent were blind recipients, 22 percent disabled, and 28 percent aged.

In December 1974, 57 percent of all SSI recipients were aged and 41 percent disabled—nearly the reverse of the current caseload distribution.

The program and demographic characteristics presented in the following tables include average benefit amounts and payment distributions for individuals and couples, living arrangements, and income, as well as age, sex, and race of the SSI recipients.

Average Payments

Data on average payments is shown for individuals and couples (table B). Over 3.3 million adult individuals and 201,000 couples received federally administered payments in December 1984. Sixty percent of individual adult recipients were disabled and 38 percent aged. Among recipient couples, however, nearly two-thirds were aged and one-third disabled.

The average monthly payment to an aged individual was $162.26; to a blind individual, $265.58; and to a disabled individual, $258.66. Monthly payments to couples averaged $272.55, $394.47, and $326.71 respectively.

Payment Distribution

Nearly half of blind and disabled individuals and 60 percent of blind and disabled children received a Federal SSI payment of $325 or higher on January 1, 1985 (table C).[2] This amount approximates the maximum benefit for individuals living in their own household and having no countable income. Similarly, 36 percent of blind couples and 29 percent of disabled couples received a payment of $488—the maximum benefit for couples (table D).

The average Federal payment to aged recipients was not as likely to be at the SSI maximum because a significant proportion also received social security benefits or other income. Only 20 percent of aged individuals and 23 percent of aged couples received the maximum monthly SSI payment.

Living Arrangements

Almost 90 percent of all the SSI recipients lived in their own households in December 1984 (table E). This group included children living in their parent's household and persons in domiciliary care facilities. Six percent were in another's household and the remaining 5 percent were receiving institutional care covered by Medicaid. Residence in another's household was more frequent for blind and disabled recipients (7 percent) than for the aged, while Medicaid institutional care was higher among the disabled (nearly 6 percent), than the aged or blind.

Income

About 60 percent of SSI recipients were also receiving other income in December 1984, some from more

[1]See "Program Provisions as of January 1986," which appears later in this report.

[2]Monthly Federal SSI payments above $325 reflect the presence of an essential person (see program provisions).

than one source (table F). The largest single income source for SSI recipients was social security benefits. Half of all recipients received social security, including 7 of 10 aged, and over a third of the blind and disabled. Their average monthly benefit was $250.61.

Eleven percent of SSI recipients had unearned income other than social security. Support and maintenance in kind was the most frequent source—32 percent, followed by veterans' benefits—24 percent, and asset income—21 percent (table G). The average monthly amount of unearned income was $84.56; support and maintenance in kind, $70.88; veterans' benefits, 125.62; and asset income, $12.06.

Earned income was reported by 3.5 percent of the SSI population—highest among the blind (6 percent) and lowest among the aged (1 percent). The average monthly amount of earned income was $126.47.

Race and Sex

Whites comprised 56 percent of all SSI recipients and blacks, 26 percent. Persons of other races accounted for nearly 5 percent, while race was not reported for the remaining 14 percent. Similar distributions were found for each eligibility category (table H).

About two-thirds of all SSI recipients were women, including three-fourths of the aged and nearly 60 percent of the blind and disabled. These data reflect a woman's higher life expectancy—78.3 years in 1983, and lower average yearly income—$8,780, compared with a man's[3]—71.0 years and $18,109.[4]

Age Distribution of Adults

A majority of adult SSI recipients were aged 65 or older (table J). This group included a third of blind recipients and nearly a fourth of disabled recipients.[5] Twenty-eight percent were age 75 or older, and 16 percent were at least 80 years old. The largest concentration of adult blind and disabled was within the 50-59 age group, which contained 20 percent of disabled adults and 15 percent of blind adults.

Age Distribution of Children

Over 248,600 children received SSI payments in December 1984, about 6 percent of the total caseload (table K). All but 7,900 of this group were disabled. Eighty-five percent of child recipients were below age 18. The remaining 15 percent—between the ages of 18 and 21—were regularly attending school.

Representative Payees

The SSI program provides for the appointment of a representative payee—a person or agency selected to receive benefits on behalf of a beneficiary, when such action is considered appropriate.

About 945,400 recipients—nearly one in four—had a representative payee (table L). Blind and disabled children were most likely to have a representative payee—94 percent, followed by disabled adults—29 percent.

Metropolitan Distribution

Nearly 70 percent of all SSI recipients lived in metropolitan areas in December 1984 (table M). Among aged recipients, the proportion residing in metropolitan areas was only 65 percent, but surpassed 70 percent in all other eligibility categories.

The Northeast had the highest proportion of metropolitan residents—89 percent, and the South, the lowest—52 percent (table N). Since 1975 the proportion of SSI recipients in metropolitan areas has risen 6 percentage points. The smallest proportionate metropolitan increase occurred in the Northeast, and the largest in the Midwest.

Program Provisions as of January 1986

The federally administered Supplemental Security Income (SSI) program was established by Congress in 1972, with payments beginning in January 1974. This program replaced the Federal-State programs of Old-Age Assistance (OAA), Aid to the Blind (AB), and Aid to the Permanently and Totally Disabled (APTD) in the 50 States and the District of Columbia. These programs continue in Guam, Puerto Rico, and the Virgin Islands. Residents of the Northern Mariana Islands became eligible for SSI in January 1978.

Basic Eligibility Requirements

To qualify for SSI payments, a person must satisfy the program criteria for age, blindness, or disability. *Aged* refers to an individual aged 65 or older. To qualify as *blind*, the individual must have vision of 20/200 or less in the better eye with the use of correcting lenses, have tunnel vision of 20 degrees or less, or have met the October 1972 State definition of blindness and received AB payments in December 1973.

Disability is defined as the inability to engage in any substantial gainful activity due to a medically determinable physical or mental impairment expected to result in death or that has lasted or can be expected to last for a continuous period of at least 12 months. Additionally, a child under age 18 who has an impairment with severity comparable to that of an adult may be considered disabled. Those persons who met the October 1972 State definition of disability and received APTD payments for December 1973 and for at least 1 month prior to July 1973 also may qualify under the disability criteria.

An *individual* is an aged, blind, or disabled adult eligible for SSI payments. An eligible *couple* is one in which both members are eligible for SSI payments, and who are living together or have been separated less than 6 months.[1] A child is defined as a person who is neither married nor head of a household and is either under age 18 or, if aged 18-21, attending school regularly.

Federal Benefit Rates

The amount of monthly Federal SSI benefits is determined by the recipient's countable income, living arrangements, and marital status. Federal SSI benefit rates are adjusted for increases in cost of living by the same percentage and at the same time as old-age, survivors, and disability insurance benefits. The Social Security Amendments of 1983 delayed the July 1983 cost-of-living increase until January 1984 and rescheduled future increases for January.

Future cost-of-living adjustments (COLA's) in SSI will continue to be based on Consumer Price Index changes. However, as the result of special legislation, the Federal SSI benefit increased by $20 per month for an individual and $30 for a couple in July 1983.[2] Then, in January 1984, under the rescheduled cost-of-living adjustment, these amounts were in turn raised by an additional 3.5 percent. The most recent COLA, effective 1986, raised Federal benefit rates by 3.1 percent. An individual (aged, blind, or disabled), living in his own household and having no countable income, now receives a benefit of $336 a month.[3] An eligible couple residing in their own home is entitled to a monthly payment of $504.

Persons in public or private institutions who receive more than 50 percent of the cost of their care from the Medicaid program under title XIX of the Social Security Act are entitled to a monthly Federal payment of $25. An inmate of a public institution is ineligible for SSI if the institution is not a Medicaid facility. However, payments may be made to persons in publicly operated community residences serving no more than 16 persons. Additionally, payments may be made to persons who are residents of public emergency shelters for the homeless for a period of up to three months in any 12-month period.

Payments to an individual transferred from a former State program may be increased monthly by $168 to take account of an "essential person" living in the household. An essential person is generally an ineligible spouse or relative whose needs were considered in determining the requirements of an eligible individual under OAA, AB, and APTD, but who is not eligible for SSI.

---

[1] One member of a couple is designated the individual, and the other the spouse. A couple is classified aged, blind, or disabled according to the classification of the individual.

[2] See Federal SSI benefit rates chart, page 11.

[3] An individual who lives in another person's household and receives both support and maintenance there has his Federal benefit rate reduced by one-third.

The following chart shows the Federal SSI benefit rates:

Eligibility status	Benefit rate		
	January-December 1984	January 1985	January 1986
Individual living in own household	$314.00	$325.00	$336.00
Couple living in own household	472.00	488.00	504.00
Individual receiving institutional care in Medicaid facility	25.00	25.00	25.00
Essential person	157.00	163.00	168.00
Cost-of-living increase (in percent)	3.5	3.5	3.1

The monthly SSI payment is prorated for the first month on the basis of the date of SSI application (or the date on which the applicant meets all eligibility criteria, if later). For example, if the application date is April 16, and the payment for the entire month would be $200, the recipient's payment for April is: ($200) x 15/30, or $100.

Income

Earned income refers to wages and net earnings from self-employment. Unearned income includes social security benefits, veterans' benefits, other government and private pensions, workers' compensation, support and maintenance in kind, and interest. For each month, $20 of earned or unearned income may be excluded. Additionally, $65 per month of earned income plus one-half the earnings above $65 are disregarded.

Certain special income exclusions are also provided, including income needed for an approved self-support plan for blind and disabled persons, work expenses of the blind, and needs-based payments made by State and local governments. Income received in sheltered workshops and work activity centers is considered earned income and qualifies for earned income disregards. Extraordinary impairment-related work expenses paid by a disabled individual (including costs for attendant care, medical equipment, drugs, and services necessary to control an impairment) are excluded from income, and also deducted from earnings when determining whether an individual is engaging in substantial gainful activity. Blind individuals having special exclusions under former State programs may retain them.

In-kind support or maintenance assistance provided by a private nonprofit organization is disregarded if the State determines that the assistance is based on need. This provision is applicable until October 1, 1987.

Energy assistance provided in kind by a private nonprofit organization, in cash or in kind by a supplier or public utility and based on need is also excluded until October 1, 1987.

For children, one-third of support payments from an absent parent is excluded, as are certain earnings of children regularly attending school.

Resources

Resources are also considered in determining SSI eligibility. The current SSI countable assets limit of $1,700 for an individual will increase by $100 each January, until it reaches $2,000 in January 1989.[4] Similarly, the present $2,550 limit for eligible couples will increase by $150 each year until it reaches $3,000 in January 1989. Excluded resources include a home and those tools and other property necessary for a self-support plan. Household goods and personal effects not exceeding $2,000 in value may also be excluded.

An automobile is excluded regardless of value if the individual or a member of the individual's household uses it for employment or transportation to medical treatments, or if it is modified to be operated by or for transportation of a handicapped person. If none of these apply, one automobile may be excluded if its current market value does not exceed $4,500. Any additional automobile is counted to the full extent of its equity value.

The cash surrender value of life insurance is excluded if the face value is $1,500 or less, as is the value of a burial space for the recipient, spouse, and immediate family. In addition, $1,500 each (less the value of excluded life insurance and any amount in an irrevocable burial trust fund) may be set aside for the burial of the recipient and spouse.

For blind or disabled persons, the resources necessary to fulfill a plan of self-support are excluded. Recipients transferred to the SSI program from State assistance programs may also retain any additional resources allowed under those programs.

Deeming of Income and Resources

The income and resources of an ineligible spouse who lives with an adult recipient or those of a parent living with a child recipient under age 18 are considered in determining the amount of payment. If the income of the ineligible spouse exceeds $163 monthly, all of it is deemed, combined with the income of the eligible person, and treated as the income of an eligible couple.

[4]Deficit Reduction Act of 1984 (Public Law 98-369).

If the income is earned, $65 per month and an income exclusion of $20 are deducted, along with half of the remaining earnings. If the income is all unearned, the $20 income exclusion is deducted. The remainder is subtracted from the Federal benefit rate for an eligible couple, currently $488. No more than $325 can be paid, however, because only one person is eligible.

When a child under age 18 is living with parents and their entire income is earned, the deeming procedure is as follows: From total income is subtracted $163 for each ineligible child in the family (less the child's own income), the earnings deduction of $65 and the $20 income exclusion. Then, twice the individual's Federal benefit rate (in a one-parent family), or twice the couple's Federal benefit rate (in a two-parent family) is subtracted. Any income remaining is unearned income to the child. If the income of the parents is all unearned, the $65 earnings exclusion is not applicable and the parental allocation is one Federal benefit rate.

Resources of the spouse or parent may also be deemed to a recipient when these resources are in excess of the amount that would be excluded if the spouse or parent were applying for SSI payments. Parental resources are not deemed to a child who has attained age 18.

If the applicant is an alien, the income and resources of the immigration sponsor are considered in determining the amount of the SSI payment. After allowances are made for the needs of the sponsor and his or her family, the remaining income and resources are deemed available for the support of the SSI applicant for a 3-year period after the individual's entry into the United States. This provision does not apply to those who become blind and/or disabled after entry, to refugees, and to persons granted political asylum.

State Supplementation

State supplementation payments—mandatory and optional—are made to persons eligible under State provisions. Mandatory State supplementation refers to payments required by Public Law 93-66 to maintain the income levels of former public assistance recipients who were transferred to the SSI program. Optional State supplementation includes additional benefits to raise the payment levels of former recipients and persons with new awards under the SSI program.

States may choose to administer these payments or have the Social Security Administration (SSA) administer payments on their behalf. In the latter case, SSA assumes the administrative cost and is reimbursed by the State for payment amounts. Under federally administered supplementation, eligibility and payment determinations are made by SSA.

To insure that the recipient benefits from the annual cost-of-living increases, States are generally required to maintain the level of their supplementation payment whenever the Federal payment level is increased. In particular, the Federal passthrough law specifies that States must maintain the State supplementary payment levels in effect in March 1983.

Special Monthly Benefits

A disabled recipient who loses Federal SSI eligibility because of earnings over the substantial gainful activity level will continue to receive a special SSI benefit of an equal amount and retain eligibility for Medicaid under title XIX of the Social Security Act. This special benefit status may continue as long as the recipient has the disabling impairment and earnings do not exceed the amount that would reduce the cash benefit to zero. States have the option of supplementing this special benefit.

Retention of Medicaid Eligibility

Blind and disabled recipients under age 65 who are no longer eligible for either regular or special SSI benefits because of their earnings may retain eligibility for Medicaid. They must meet the following conditions:

a. continue to meet the medical criteria for disability or blindness;
b. continue to meet all other SSI eligibility standards except for earned income;
c. be seriously inhibited from continuing employment if Medicaid services were lost;
d. have insufficient earnings to provide a reasonable equivalent of SSI benefits (including State supplementation), and Medicaid.

These two provisions, special cash benefits and continued Medicaid eligibility, were part of the Social Security Disability Amendments of 1980 (P.L. 96-265), and were in effect from January 1981 through December 1983. Beginning in 1984, under a 1-year demonstration project, these provisions were continued for persons eligible for either regular or special SSI payments or continuation of Medicaid eligibility. The Social Security Disability Reform Amendments of 1984 (Public Law 98-460) extended these provisions through June 30, 1987.

1986 Publications Catalog

Now you can have a timely, easy-to-use guide to sources of research and statistical information at your fingertips. Researchers, planners, developers, and decisionmakers will find this catalog an invaluable resource on social security today.

The ***Catalog*** is a selected list of current publications produced by SSA's Office of Research, Statistics, and International Policy. Each publication has a descriptive annotation that includes the date and source of the data. The overall organization is by subject area: for example, all statistical releases are grouped together, as are studies of the retired population, SSI and AFDC recipients, social security programs in other countries, legislative histories, commission reports, and so forth. At the end of the ***Catalog*** is a list and description of the various microdata files SSA has made available to non-SSA researchers. A contact person and phone number is given for each file.

You can order the ***1986 Publications Catalog*** from:
